### 1 Introduction

The services include selective consulting and support as well as comprehensive development and framework organisation in the area of knowledge based systems. Here is a short overview:

Picture 1: Brief Description of our Services

### 2 Foreign Components

The client can benefit from the XLOG competence in the area of knowledge based systems. XLOG can carry out pilot studies and suggest fundamental technical and organisational solutions. Moreover XLOG can perform evaluations and suggest possible concrete solutions.

### **3 Proprietary Components**

The client can benefit from the XLOG technology in the area of knowledge based systems. If required, he can purchase XLOG components and use them in his own solutions. He benefits from a constant component update and a functions warranty.

### **4 Standard Applications**

The client can benefit from the XLOG technology in the area of traditional application development. If required, XLOG provides complete solutions with integrated components. He thus benefits from our configuration and initialisation support.

### **5 Custom Applications**

The client can benefit from the XLOG competence in the area of traditional application development. If required, he can partially assign the solution development to XLOG. XLOG can take on the main study, the systems engineering, the implementation and the maintenance. The client thus benefits from an interdisciplinary and structured approach.

### **6 Prices**

On request we will send you our latest service price-list. Services are provided after the conclusion of separate agreements.
